

Contents

Preface	xxi
Chapter 1 Natural Resources: An Overview	1
Natural Resources Defined	1
Abiotic and biotic resources	2
Ecosystems defined	2
Resource consumption, use, and renewal	2
Natural Resource Management	5
Management objectives	5
Private and public resource management	5
An integrated approach to management	6
Careers and Education in Natural Resource Management	7
The Need for Natural Resource Management	9
The human population increase	9
Land Area and Land Uses	12
Natural resource issues	13
An Optimistic View of the Future	16
Other Sources of Information	17
Organization of the Book	17
Section 1: Management foundations	17
Section 2: Air, water, land and living resources	17
Section 3: The land-based renewable resources	18
Section 4: The wild living resources	18
Section 5: The mineral and energy resources	18
Section 6: Integration of natural resources management	19
Literature Cited	19
SECTION 1 MANAGEMENT FOUNDATIONS	21
Chapter 2 The Historical Perspective	23
Colonization (up to 1776)	23
Ecology and landscape	23
Economics	27
Policy	29
Westward Expansion (1776–1860)	30
Ecology and landscape	30
Economics	31
Policy	34

CONTENTS

The Gilded Age (1861–1899)	36
Ecology and landscape	36
Economics	37
Policy	39
The Progressive Period (1900–1945)	44
Ecology and landscape	44
Economics	45
Policy	47
Neoprogressive Period (1945–Present)	52
Ecology and landscape	52
Economics	54
Policy	56
Literature Cited	61

Chapter 3 **Basic Ecology** **63**

Introduction	63
Populations	63
Population identity	63
Distribution and dispersal	64
Factors affecting population distribution	65
Population habitat and physical niche	66
Population Structure and Dynamics	66
Population structure	66
Population dynamics	66
Population Energetics, Biomass, and Production	68
Energetics	68
Population biomass	70
Production, productivity, and P/B ratio	70
Population Strategies	70
Communities	72
Definition	72
Community Structure and Functions	72
Community habitat	72
Biodiversity	73
Trophic functions	74
Competitive interactions within communities	77
Interaction among biotic communities	79
Ecosystems	81
Ecosystems defined	81
Ecosystem services	82
Ecosystem Structure, Function, and Service	83
Energy flow	83
Material flow, storage, and cycling	86
Succession	91
Ecosystem manipulators: The human component	100
Literature Cited	101

Chapter 4 **Conservation Economics** **104**

The Problem	104
Hard Choices	104
Timber versus Spotted Owls (Pacific NW)	105
Cheap energy versus functioning ecosystems	105
Clean air versus cheap steel	105
Endangered wolves versus livestock and wildlife	106
Wetlands versus housing and transportation	106

Hydropower versus recreation	106
Electric power versus productive lakes	106
Mining versus recreation on public lands	107
Riparian ecosystems versus livestock	107
Hydro-dam relicensing	107
Choices Displace Opportunities	107
Economics is about choices	108
Importance of good decisions	109
What the market mechanism does	109
How the market solves the three problems	109
Who controls the market?	111
The invisible hand of the market	111
Can profit incentives protect natural resources?	111
How markets settle conservation questions	112
When are markets best at promoting conservation?	112
Limits of the market	113
The Future	113
Harnessing the Power of the Market	114
Concepts for incentive-based pollution control	114
Pollution taxes	114
Marketable waste emission permit systems	115
Applications of Incentive-Based Regulations	117
Pollution taxes	117
Marketable permit systems	118
Governments and Conservation	119
How government settles conservation questions	119
Limits of government in settling conservation questions	119
Rent seeking	119
Taxpayer ignorance	119
Empire building	119
Abuses of economic analysis	120
What government can do to protect natural resources	120
Why measure benefits and costs?	121
How to Measure Benefits and Costs	122
Basic principles	122
Implementation principles	123
Implementation practices, incremental benefits, and costs	123
Measurement problems	123
Scope and Limits of BCA	124
The bad news	124
The good news	124
Summary of BCA	125
Conclusion	125
Literature Cited	125

Chapter 5 Planning, Policy, and Administration 127

Elements of Organizational Function	127
Managing problems and opportunities	127
Organizational integration	127
Management Systems	129
Organizations as management systems	129
Managing the system for results	135
Public, private, and advocacy systems	135
Planning Process	137
Inventorying planning environments	137

Focusing management intent	139
Translating strategy into operations	141
Placing Boundaries on Planning Process	142
Organizational planning boundaries	142
Regional (geographic) planning	144
Integrated resource management planning	144
Examples of Agency Planning	145
The Environmental Protection Agency	145
The Corps of Engineers	146
The USDA Forest Service	147
Policy	148
What is policy?	148
Roles of federal, state, and local governments	148
Budget policy	149
Public and private policy	149
Making Policy	149
U.S. Constitution and policy development	149
Legislation	150
Organizational Administration	151
Integrating organizational activities	151
Information flow and authority	152
Information management	153
Networking	154
Summary	154
Literature Cited	155

SECTION 2 AIR, WATER, AND LAND RESOURCES

157

Chapter 6 Atmospheric Resources and Climate

159

The Importance of Atmosphere and Climate	159
Global Warming and Ozone Problems	159
Climate Factors	160
Atmospheric composition and pressure	160
Solar radiation	161
Earth latitude, shape, and rotation	161
Distribution of continents	162
Topography	162
Marine currents	163
Interactions between climatic factors	164
Vegetation as a climatic factor	165
Climatic Elements	165
Wind	165
Temperature and frost-free period	166
Precipitation	167
Precipitation systems	170
Humidity	171
World Climate Types	171
Equable climate	171
Desert climate	171
Polar climate	171
Mediterranean climate	172
Continental climate	172
Tropical wet and dry climate	172
U.S. Regional Climate Types	172
The Pacific climate	172

The Great Basin climate	173
The Southwestern climate	173
The Plains climate	175
The Eastern climate	175
The Florida climate	175
Climatic Instability and Natural Resource Management	175
World climatic history	175
Climatic lessons from the past	177
Climatic Change and Human Activities	178
The greenhouse effect and radiation balance	178
Global warming and fossil fuels	180
The implications of global warming	181
Possible strategies for managing global warming	182
Acid precipitation	183
Ozone depletion	184
Desertification	184
Literature Cited	186

Chapter 7 Water Resources 188

The Importance of Water	188
World Water Problems	190
The Properties of Water	190
Physical attributes	190
Water Forms and Distribution	191
The planet's reserves	191
Glacial ice	192
Lakes	192
Streams and rivers	192
Wetlands	193
Oceans	193
Groundwater	193
Watershed Management	193
The hydrologic cycle	193
The watershed	193
Watershed management objectives	195
Watershed processes	196
Managing watershed land-use practices	198
Managing riparian areas	200
Special watershed management techniques	201
Multipurpose Water Resource Management	202
The water resource management agencies	202
Integrated management objectives	203
Water management engineering	204
Water Quality Problems	207
Types of water quality problems	207
Surface water impairment	208
Disease-causing organisms	209
Nutrients	209
Silts and suspended solids	210
Biochemical oxygen demand (BOD)	210
Salinity and other dissolved solids	211
Toxic materials	211
Acid mine drainage	211
Thermal discharges	212
Approaches to Water Quality Management	212
Classification of water pollution sources	212

CONTENTS

The watershed approach	212
Water treatment	212
Home water treatment	214
Water Uses in the United States	214
Types of water use	214
Off-stream uses	216
In-stream uses	218
Regional trends in water use and consumption	219
Water Use Problems and Conflicts	219
Overpumping	219
Water allocation and wildlife habitat	220
Salinization	222
Water ownership	222
Meeting Water Demand in the Twenty-First Century	224
Water conservation	224
Reclamation of sewage water	224
Development of groundwater	224
Desalinization	225
Developing salt-resistant crops	225
Developing drought-resistant crops	225
Rainmaking	225
Harvesting icebergs	225
Long-distance water transport	225
Improved integration of water use	226
Water in the nation's future	226
Literature Cited	227

Chapter 8 Soil: The Basic Land Resource 230

Importance of Soil	230
The soil profile	230
Soil formation	232
Soil characteristics	233
Soil classification	236
Soil erosion	240
Soil erosion in the United States	243
Soil Conservation Practices	247
Conservation tillage	247
Strip-cropping	248
Contour farming	249
Terracing	249
Gully reclamation	250
Windbreaks	250
Retirement of erodible lands	252
Conservation buffers	252
Soils and carbon sequestration	254
Maintaining soil fertility	254
Conservation Planning	255
Soil Policy	256
Literature Cited	258

Chapter 9 Ecosystems of the United States 260

Introduction	260
Terrestrial Ecosystems of the World	260
Biomes	260
Grasslands of the world	261

Desert shrublands of the world	265
Savanna woodlands of the world	266
Forests of the world	266
Tundra of the world	267
Terrestrial Ecosystems of the United States	267
Grasslands	268
Tallgrass prairie	268
Southern mixed prairie	270
Northern mixed prairie	271
Shortgrass prairie	271
California annual grassland	272
Palouse prairie	273
Deserts	274
Hot desert	274
Cold desert	276
Woodlands	278
Piñon-juniper woodland	278
Mountain shrub	279
Oak woodlands	280
Chaparral	280
Forest Ecosystems	281
Western coniferous forest	281
Northern forest	283
Eastern deciduous forest	284
Southern forest	285
Southern river bottomland forests	286
Tundra Ecosystems	287
Vertebrates in Terrestrial Ecosystems	288
Vertebrate importance	288
Vertebrate ranges and ecological limits	288
Moisture and surface water	289
Food distribution	289
Land and vegetation form	289
Species interactions	290
Aquatic Ecosystems	290
Wetland ecosystems	290
Lake ecosystems	295
Stream and river ecosystems	297
Estuarine ecosystems	302
Marine ecosystems	304
Literature Cited	309

SECTION 3 THE LAND-BASED RENEWABLE RESOURCES

311

Chapter 10 Forests and Forestry

313

The State of Forestry	313
World overview	314
Tree Structure and Function	314
Forest Products	316
Forest Distribution	317
Boreal forest (Taiga)	318
Temperate deciduous forests	319
Temperate coniferous forests	319
Temperate mixed forests	319

Temperate broad-leaved evergreen forests	320
Tropical evergreen forests	320
Tropical deciduous forests	321
U.S. Forest Types and Resources	322
Major forest types and uses	322
U.S. forest land area	326
Timber production	327
Forest ownership	329
Forest Management	329
Forest management defined	329
Stand Management	331
Criteria used to classify forest stands	331
Stand age and size distribution	331
Species composition	333
Classification based on density	333
Classification based on site quality	334
The concept of shade tolerance	335
Silvicultural systems	336
Cutting and reproduction methods	336
Intermediate treatments	338
Emergency cuttings or thinnings	340
Timber Harvesting	341
Tree Planting	341
Forest Protection	343
Forest fire	343
Insects	344
Disease	344
Exotic pests	345
Abiotic factors	345
Forest Ecosystem Management	345
The need for management change	345
Ecosystem management defined	346
Silviculture and ecosystem management	346
The clear-cutting controversy	347
Ecosystem management and fire	348
Gap dynamics	351
Forest succession and ecosystem management	351
Forest Conservation Issues	352
Deforestation and global warming	352
Wastepaper recycling	353
Reducing paper use	353
Concluding Remarks	353
Literature Cited	354

Chapter 11 Rangeland and Range Management 357

Introduction	357
Rangeland Management Defined	358
Basic range management concepts	358
Types of Rangeland	359
Grasslands	360
Desert shrublands	361
Forests	361
Savanna woodlands	361
Tundra	361
Historical Perspective	361

Rangeland Ecology	362
Grazing effects on range plants	362
Rangeland condition and trend	363
Range Animal Ecology	365
Comparative digestive systems	365
Forage selection by different ungulates	365
Comparative nutritive value of grasses, forbs, and shrubs	366
Use of nutritional knowledge in management	368
Animal suitability for different rangelands	368
Rangeland Management	369
Importance of correct stocking rate	369
Improving livestock distribution	371
Grazing systems	373
Rangeland Livestock Production	380
Recent trends	380
Importance of the West	380
Livestock management during drought	381
Poisonous plant problems	381
Controlling vegetation for livestock production	382
Government Rangeland Policy	383
Dealing with the "tragedy of the commons"	383
Importance of federal lands	383
Policy changes	384
Range Management and the Future	387
Literature Cited	388

Chapter 12 Farmland and Food Production 391

Introduction	391
World Food Overview	391
A Brief History of Agriculture	393
Major Types of Agriculture	394
The Green Revolution	394
U.S. Agricultural Success and Problems	396
A success story	396
Increasing regulation	398
Urban sprawl	398
Rising production costs	400
Declining exports	400
Atmospheric pollution	401
Restricted water supplies	401
Excess capacity	401
Agriculture in Developing Countries	401
Intercropping	402
Double cropping	402
Agroforestry	402
Polyculture	402
Animal agriculture	402
International trends	403
Agriculture prospects in developing countries	404
Pesticide Controversies	405
The pest problem	405
Alternatives to pesticides alone	406
Sustainable Agriculture	407
Farmland Policy	408
The issues	408

Forms of farm subsidies in the United States	410
Farm programs in other countries	413
Trends in current policy	414
Eliminating Government Involvement in Agriculture:	
The New Zealand Case	415
Conclusion	416
Literature Cited	416

Chapter 13 Outdoor Recreation 417

Introduction	417
What is Recreation?	417
The Importance of Outdoor Recreation	420
Attributes of Outdoor Recreation	420
Resource Conflicts and Resolution	421
Historical Perspectives	422
Federal management	422
Early attitudes	422
Recent trends	423
Recreational Management	424
Distribution of outdoor recreation and recreation lands	424
Recreation provided by federal agencies	424
Recreation provided by state and local government	429
Private recreation opportunities and tourism	429
Recreational Challenges on Public Lands	429
Importance of public land recreation	429
Subdividing private grazing lands	430
Agriculture on the urban interface	431
Scenic beauty and range management	432
Public opinion and management of federal rangelands	432
Recreation and ranching	433
Managing recreation costs on public lands	433
Conflict resolution in multiple-use decisions	434
Outdoor Recreational Management	435
Interfacing people with resources	435
Recreational planning	435
Recreational economics	436
Integrative management planning	437
Recreational resource managers	437
Visitor management	438
Natural resource management	439
Information service management	440
Future Demands for Outdoor Recreation	440
Literature Cited	442

Chapter 14 Urban Land-Use Management 445

The Urban Ecosystem	445
Resources and services expectations	445
The Urban Ecosystem	446
Material and energy flux	446
Extent of urban impacts	447
Integrating natural ecological services into urban design	448
Urban form and function	449
Integrating urban form with natural functions	450

Development of Urban Infrastructure	453
A partnership of public and private interests	453
Transportation	455
Utilities	456
Housing subsidies	457
The superhighways	458
Population Redistribution and Urban Change	460
Growth and decline of the urban center	460
The role of the automobile	460
Urban sprawl and downtown renewal	461
Urban Land-Use Planning	463
Historic land-use development	463
Contemporary Urban Land-Use Planning	465
Planning professionals	465
Nongovernment stakeholders	465
Government role in planning	466
Managing the Urban Ecosystem	467
Integrating urban ecosystem services	467
Land	468
Water	472
Air	477
Regional Planning Challenges	481
Literature Cited	481

SECTION 4 THE WILD LIVING RESOURCES **485**

Chapter 15 Wildlife Conservation and Management **487**

Introduction	487
Wildlife Values and Conflicts	487
The controversial resource	487
Wildlife authority	488
What Is Wildlife?	489
The professional concept of wildlife	489
The public concept of wildlife	489
Management Philosophy: Wildlife Conservation	490
Values of wildlife	491
Historical and Legislative Perspectives of Wildlife Conservation	493
Foods and other goods	493
Recreation	496
Animal damage control	498
Management perspectives in the twentieth century	500
Threatened and endangered species	504
Responsibilities of a Wildlife Manager	505
Changing emphasis	505
Population assessment and management	506
Habitat assessment and management	507
Resource demand assessment and management	507
Resource user satisfaction	508
Education and research	508
Contemporary Concepts in Wildlife Management	509
Managing wildlife supply and demand	509

The role of public input	509
Categorizing wildlife for management	510
Habitat management	510
Habitat management strategies	517
Managing wildlife populations	517
Commercialization and Wildlife Management	522
Challenges and Trends in Wildlife Management	524
Literature Cited	526
 Chapter 16 Fishery Conservation and Management	 529
The Fishery Resource	529
Fishing for Food and Other Goods	531
Cultural importance	531
Early fishery allocation	533
North American fisheries	533
Technological revolution	534
Reaching food fishery limits	535
The aquacultural potential	539
Recreational Fishing	540
Cultural significance	540
Growth of sportfishing in the United States	540
The limits to sportfishing	542
Fisheries Biodiversity Issues	543
A growing concern	543
Biodiversity values	544
Fishery Science and Management	545
Early management emphases	545
Modern fishery management	546
Key management principles	549
The Fishery Professional	553
Changing expectations	553
Bioassessment and management	554
Habitat assessment and management	554
Resource demand assessment and management	555
Resource user satisfaction	556
Management administration	556
Original research	557
Education	557
Future Fishery Issues	557
Literature Cited	558
 Chapter 17 Biodiversity and Endangered Species Management	 561
The Dilemma	561
Biodiversity	562
Biodiversity conservation	562
The escalating loss of biodiversity	563
Biodiversity services and value	564
Endangered Species	566
What are endangered species?	566
Causes of extinction	567
Endangered Species Policy and Management	571
Legislation and treaties	571
Management needed to maintain biodiversity	573
Endangered Ecosystems	574
Literature Cited	575

SECTION 5 THE MINERAL AND ENERGY RESOURCES**579****Chapter 18 Mineral Resources****581**

Introduction	581
Geological Foundations	581
The realm of minerals and rocks	581
Plate tectonics	583
Plate boundaries	584
The rock cycle	584
Mineral deposits	586
Mineral distribution and abundance	587
Strategic and critical minerals	589
Mining and Mineral Extraction	589
What is an ore?	589
Surface mining	589
Subsurface mining	590
Processing	590
Important Metallic Minerals	592
Iron	592
Aluminum	592
Copper	593
Lead	593
Zinc	593
Gold and silver	593
Nonmetallic resources	593
Recycling	594
Recycling metals	594
Iron and steel	595
Aluminum	596
Copper	596
Lead	597
Environmental Concerns with Mining Activities	597
Geological exploration	597
Mining extraction	597
Mineral processing	599
Future mineral availability	599
Literature Cited	600

Chapter 19 Nonrenewable Energy Resources**602**

Introduction	602
World Overview	602
Energy Use	603
Historical perspective	603
Energy use today	604
Electrical energy	605
Energy in the home, business, and industry	606
Energy used for transportation	608
Energy Production	608
Coal	609
Oil and gas	615
Nuclear energy	623
Nonrenewable Energy and the Environment	630
Nuclear plant accidents	630
Terrorism	633
Environmental degradation	633

The Immediate Future	634
Literature Cited	634
Chapter 20 Renewable Energy: The Sustainable Path to a Secure Energy Future	636
Introduction	636
Renewable Energy Sources	638
Solar energy	638
Wind energy	642
Hydropower	647
Biomass	648
Geothermal energy	652
Additional renewable energy sources	655
Concluding Remarks	657
Literature Cited	659
 SECTION 6 INTEGRATION OF NATURAL RESOURCES MANAGEMENT	 661
Chapter 21 Natural Resources and International Development	663
Introduction	663
Problems with Third World Development	663
National unity	664
Market-oriented economy	665
Democratic form of government	666
Sound education system	666
Protection of property rights	666
Opportunity for social and economic mobility	667
Level of economic growth exceeds level of population growth	667
Growth Strategies	669
Development options	669
Natural Resources versus Entrepreneurship	670
International Policy	671
Third World Debt Crisis	672
Literature Cited	673
 Chapter 22 Economics and Economic Systems	 674
Introduction	674
Economic Terminology	674
Basic Economic Principles	674
Market theories	675
The Marx alternative to markets	676
Mixed economies	677
The most successful economy in the world	678
Problems with Market Economies: The Business Cycle	680
Stages of the business cycle	681
Depressions in the United States	683
Keynesian economic approach	686
The economy of the 1980s and 1990s	687
Creative Destruction and Human Progress	688
Problems with Centrally Planned Economies	690
Environmental problems in the former Soviet Union	691
The collapse of communism	692
Problems with Mixed Economies	693

Importance of International Trade and Competition	694
International trade	694
International competition	695
Economies in the Twenty-First Century	696
Literature Cited	697

Chapter 23 Sustainable Development, Technology, and the Future 699

Overview	699
Sustainable Development	700
Defining sustainable development	700
National sustainable development goals	701
National Strategies for Sustainable Development	702
Sustainable development and conservation	702
Information deficiencies and sustainable development	703
Sustainable development in U.S. river corridors	703
Land control and sustainable development	704
Ecosystem Management	705
Defining ecosystem management	705
Integrating resources management into ecosystems management	706
Ecosystem health and adaptive management	708
Technology	708
Computers	708
Systems analysis	709
Model software for ecosystem analysis	710
Artificial intelligence	710
Virtual reality	711
Economic analysis	711
The Future	712
Nanotechnology	714
Optimism versus pessimism	715
Literature Cited	716

Glossary 719

Index 751
