Introduction to Scopus

What is Scopus ?

Scopus is the largest abstract and citation database of peer-reviewed research literature from around the world. Delivering a comprehensive overview of the world's research output in the fields of science, technology, medicine, social sciences, and arts and humanities. Scopus features smart tools to track, analyze and visualize research.

Over 22,800 titles from more than 5,000 international publishers and 105 different countries

Over 70 million records, 24 million patents from 5 patent offices worldwide

All content is vigorously vetted by an independent, international board of experts called the Content Selection and Advisory Board (CSAB)

More than 4,000 customers worldwide in all geographic regions

QS and THE are not alone: More than 3500 organizations, including more than 150 research organizations, rely on Scopus data

Rankings:

THE WORLD UNIVERSITY RANKINGS

Basic Functions in Scopus

Peer-reviewed research literature

A researcher reads > 300 articles per year

**3.7 Hrs spent
SEARCHING for
articles per week**

Researchers spend an average
10 hours per week searching
for and reading articles

....of which, **3.5 hours** is spent
searching for research articles and
5.5 hours reading.

- Researchers in Chemistry and Life Science spend longer than average searching for articles and chemists spend longer reading
- Younger researchers spend > **4hrs** a week searching.
- Researchers from China spend longer searching (**six hours**) and reading (**nine hours**) articles than any other country.
n=4,225

**5.6 Hrs spent
READING articles per
week**

**6 articles read
per week**

**42% regarded as
'important'**

- A researcher typically reads **six** articles per week.
- Chemists read nine per week. Mathematicians read four articles per week.
- China-based researchers read one more than average per week (7 articles).
- After searching and reading for 10 hrs per week only **42%** of the papers read are considered important.

MicroRNAs: Genomics, Biogenesis, Mechanism, and Function (Review)

Bartel, D.P.^{a,*}

^aWhitehead Inst. for Biomed. Research, 9 Cambridge Center, Cambridge, MA 02142, United States

^bDepartment of Biology, MA Institute of Technology, Cambridge, MA 02139, United States

Abstract

MicroRNAs (miRNAs) are endogenous ~22 nt RNAs that can play important regulatory roles in animals and plants by targeting mRNAs for cleavage or translational repression. Although they escaped notice until relatively recently, miRNAs comprise one of the more abundant classes of gene regulatory molecules in multicellular organisms and likely influence the output of many protein-coding genes.

Author search

[Compare sources >](#)

To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

Abstract

 View references (132)

MicroRNAs (miRNAs) are endogenous ~22 nt RNAs that can play important regulatory roles in animals and plants by targeting mRNAs for cleavage or translational repression. Although they escaped notice until relatively recently, miRNAs comprise one of the more abundant classes of gene regulatory molecules in multicellular organisms and likely influence the output of many protein-coding genes.

PlumX Metrics : The Five Categories

The Five Categories:

Usage – A way to signal if anyone is reading the articles or otherwise using the research. Usage is the number one statistic researchers want to know after citations.

Examples: clicks, downloads, views, library holdings, video plays [Learn more](#)

Captures – Indicates that someone wants to come back to the work. Captures can be an leading indicator of future citations.

Examples: bookmarks, code forks, favorites, readers, watchers [Learn more](#)

Mentions – Measurement of activities such as news articles or blog posts about research. Mentions is a way to tell that people are truly engaging with the research.

Examples: blog posts, comments, reviews, Wikipedia links, news media [Learn more](#)

Social media -This category includes the tweets, Facebook likes, etc. that reference the research. Social Media can help measure “buzz” and attention. Social media can also be a good measure of how well a particular piece of research has been promoted.

Examples: +1s, likes, shares, tweets [Learn more](#)

Citations – This is a category that contains both traditional citation indexes such as Scopus, as well as citations that help indicate societal impact such as Clinical or Policy Citations.

Examples: citation indexes, patent citations, clinical citations, policy citations [Learn more](#)

Very high resolution interpolated climate surfaces for global land areas (Article)

Hijmans, R.J.^a , Cameron, S.E.^{a,b,c}, Parra, J.L.^a, Jones, P.G.^d, Jarvis, A.^{d,e}

Abstract

We developed interpolated climate surfaces for global land areas (excluding Antarctica) at a spatial resolution of 30 arc s (often referred to as 1-km spatial resolution). The climate elements considered were monthly precipitation and mean, minimum, and maximum temperature. Input data were gathered from a variety of sources and, where possible, were restricted to records from the 1950-2000 period. We used the thin-plate smoothing spline algorithm implemented in the ANUSPLIN package for interpolation, using latitude, longitude, and elevation as independent variables. We quantified uncertainty arising from the input data, the interpolation by mapping weather station density, elevation bias in the weather stations, and elevation bias in the input data. Elevation bias tended to be negative (stations lower than expected) at high latitudes but positive at low latitudes. The interpolation showed overall agreement, but with significant variation in some regions. A local differences, particularly in mountainous areas. Compared to previous global climatologies, ours has the highest resolution (1 km vs. 500 km or more); more weather station records were used; improved elevation data were used; and more weather station records were used. Owing to the overall low density of available climate stations, our surfaces do not capture of all variation in mountainous areas. In future work, such variation might be captured through knowledge-based methods. Copyright © 2005 Royal Meteorological Society.

Impact Factor™

A ratio between citations and recent citable items published in a journal;
the average number of citations received per published article.

Citations to non-source items (editorials, letters, news items, book reviews, abstracts, etc) may inflate the IF

2008 Impact
Factor

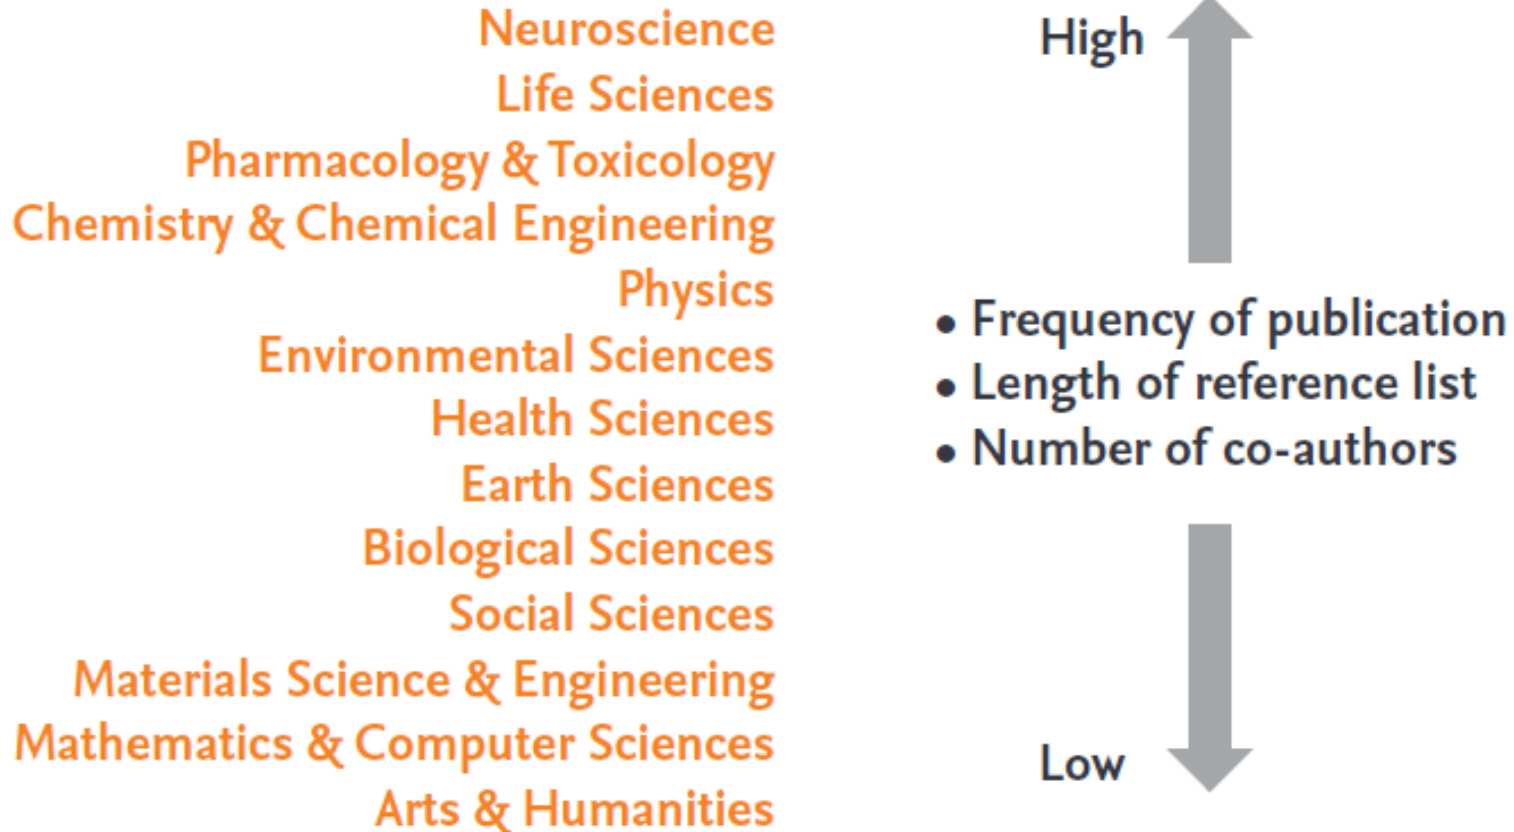

=

A = the number of times that **all items** published in that journal in 2006 and 2007 were cited by indexed publications during 2008.

B = the total number of "citable items" published by that journal in 2006 and 2007.

("Citable items" for this calculation are usually articles, reviews, proceedings, or notes; not editorials or letters to the editor).

Citation practices differ between disciplines

Because some subject areas are cited more often than others, we should not compare papers from different fields without applying normalization.

Publications types receive differing levels of citations

Because some publication types are cited more often than others, we should not compare different types without applying normalization.

Influences on the IF: Article type

SNIP: Source-normalized impact per paper

All **20K** journals have a **Source-normalized impact per paper** (SNIP) measuring contextual citation impact by weighting citations per subject field

- Peer-reviewed papers only
- Three year citation window
- Field's frequency and immediacy of citation
- Database coverage
- Journal's scope and focus
- Measured relative to database median

Journal	IPP	Cit. Pot.	SNIP (RIP/Cit. Pot.)
Inventiones Mathematicae	1.5	0.4	3.8
Molecular Cell	13.0	3.2	4.0

SJR: SCImago Journal Rank

All **20K** journals have a **SCImago Journal Rank** (SJR) a prestige metric based on the idea that not all citations are equal

- SJR is a variant of the eigenvector centrality measure used in network theory and is inspired by the PageRank algorithm used in Google.
- Prestige transferred when a journal cites
 - Citations are weighted depending on where they come from
 - journal's prestige is shared equally between its citations

SJR normalizes for differences in citation behaviour between subject fields

Paper abstract
In this paper, an optimized positive feedback based control approach is developed for lightweight aerospace structures. A modified form of the positive velocity feedback compensator of each mode is enhanced with a parallel lossy integrator. For multi-mode systems, compensators are required. A focus of this paper is on development of effective suppression performance of the vibration controller. The optimization problem is formulated as a Quadratic Regulator (LQR). A flexible clamped-free beam is considered as a sample structure. The LQR-optimized MPVF provides a compensated result between vibration and control effort. The M-norm approach, on the other hand, aims to directly suppress each mode of vibration. The MPVF controller focuses on modes with higher amplitudes of velocity, and optimized method.

Fields of research
Optional: refine your search by selecting up to three research fields

Scopus 2015 Review, Part 1: More content, but n of quality

Submitted by Susannah Beatty... on Mon, 12/14/2015 - 20:26

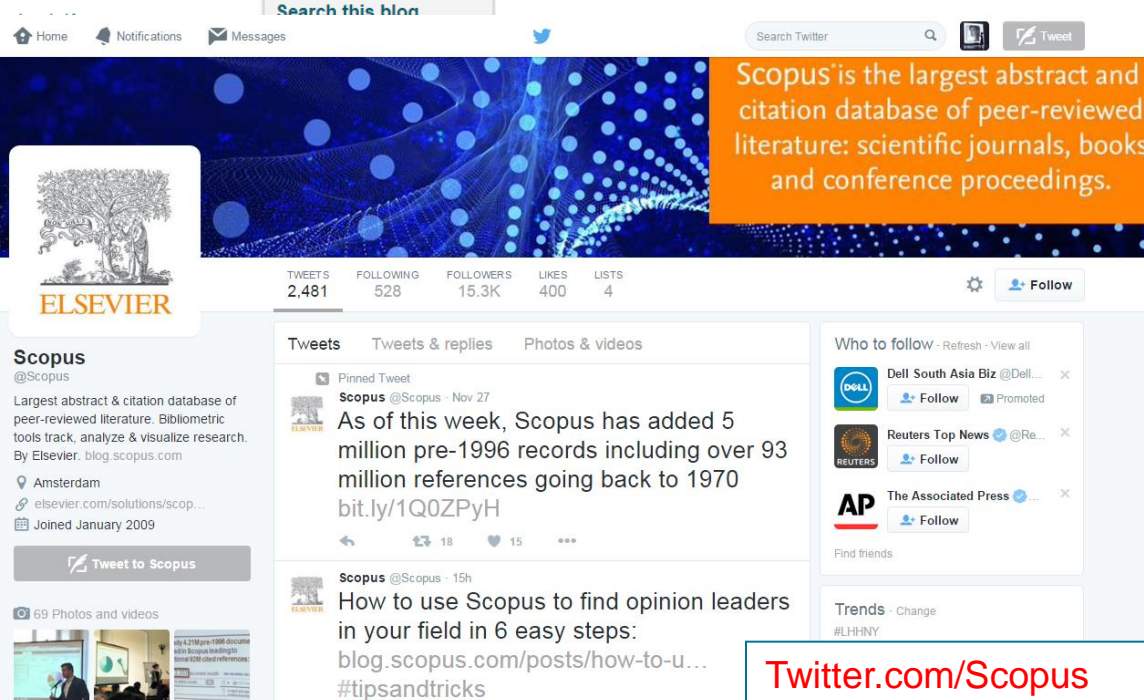

As 2015 comes to an end, it's time to reflect upon the year and look at how Scopus has, the next 3 days we share key 2015 Scopus developments and their impact on the research different focus. This post, part 1, covers content expansion and quality. The next post, part 2, covers functionality. And the final post, part 3, will look at data partnerships.

In terms of content, Scopus has been growing exponentially, but this is not at the expense of quality. We know about what's changed for Scopus content in 2015:

1.) CSAB implements additional content quality measures. High content quality has always been important to Scopus and why the independent Scopus
